

Osmo Cleaning Kit for Floors

(Sold with or without Osmo's telescopic handle)

DRY SWEEPING

Floors treated with Polyx® Oil repel dirt and, contrary to many other types of flooring, they will not be charged electrostatically, nor do they serve as a breeding ground to microbes or allergens. You can remove dust, lint and fluff with a broom or a vacuum cleaner, or even easier with the Osmo Cleaning Kit and the green dust mop. Perfect for the dry sweeping of all timber floors.

DAMP MOPPING

You may need to damp mop your floor occasionally to remove things like muddy footprints and spilt food etc. You can remove dirt and grime using Osmo's Wash and Care, which is a plant based detergent. Just use a capful in a litre of water, and apply using the micro mop.

INTENSIVE CLEANING AND REFRESHING

From time to time your wooden floor will need refreshing with Osmo Liquid Wax Cleaner. Applied with the active fibre cloth, this rejuvenates the Polyx® Oil and preserves the charm and character of your floor. 1 litre is sufficient for approx. for 80 – 100 m². The interval for refreshing your floor depends on its usage. In bars, restaurants and commercial areas, the interval for refreshing will be shorter than for normal domestic areas. For commercial floors, and areas over 200 square metres, we recommend using the Osmo FloorXcentre rather than the cleaning kit.
